

Climate Science Outreach

The John Muir Institute of the Environment communicates and translates climate science research beyond the university.

THE MISSION of the John Muir Institute of the Environment (JMIE) is to strengthen the scientific foundation for environmental decision making, engage stakeholders, provide professional skills development for environmental careers, and act as a conduit of UC Davis environmental research between the university and policy makers, scientists, and the public.

Graduate students, trained in JMIE's Environmental Leaders Program, help communities solve environmental problems, e.g. by reducing stormwater pollution.

Faculty, staff, and students partner with the City of Davis to run the Cool Davis Initiative, a behavior change campaign to reduce GHG emissions.

Outreach providers engage people of all ages in programs that educate about sustainability and foster stewardship of natural resources.
